

2. College Student Attendance App – UI/UX Design

Project Overview

The **College Student Attendance App** is a mobile application UI/UX design created using **Figma**. The application helps students easily view their overall attendance, subject-wise attendance details, attendance history, and profile information.

Features

- **Login Screen** – Student ID, password, and Login button.
- **Dashboard** – Displays student name, register number, overall attendance percentage, and subject-wise summary.
- **Subject Details** – Shows subject name, classes conducted, classes attended, and attendance percentage.
- **Attendance History** – Displays present, absent, and leave status for different dates.
- **Profile Screen** – Displays student photo, name, department, year, and register number.
- **Clickable Prototype** – Screens are connected for easy navigation.

Figma Requirements Used

- Reusable UI components for buttons and navigation elements.
- Auto Layout for organizing UI elements.
- Prototype connections for screen-to-screen navigation.
- Consistent colors, typography, spacing, and mobile screen layout.

Tools Used

- **Figma**
- **UI/UX Design**
- **Figma Prototype**

Prototype Flow

Conclusion

The project provides a simple and user-friendly interface for students to monitor their attendance and access subject-wise attendance information through a mobile application prototype.
